New 8FX MB95310L/370L Series 8-bit Microcontrollers

MB95310L/370L is a series of general-purpose, single-chip microcontrollers. In addition to a compact instruction set, the microcontrollers of this series contain a variety of peripheral resources.

Features

F²MC-8FX CPU core

Instruction set optimized for controllers

- Multiplication and division instructions
- 16-bit arithmetic operations
- Bit test branch instructions
- Bit manipulation instructions, etc.

Clock

- Selectable main clock source
 - Main OSC clock (up to 16.25 MHz, maximum machine clock frequency: 8.125 MHz)
 - External clock (up to 32.5 MHz, maximum machine clock frequency: 16.25 MHz)
 - Main CR clock (1/8/10/12.5 MHz \pm 2%, maximum machine clock frequency: 12.5 MHz)
 - Main PLL clock (up to 16.25 MHz, maximum machine clock frequency: 16.25 MHz)
- Selectable subclock source
 - Sub-OSC clock (32.768 kHz)
 - External clock (32.768 kHz)
 - Sub-CR clock (Typ: 100 kHz, Min: 50 kHz, Max: 200 kHz)

Timer

- 8/16-bit composite timer
- 8/16-bit PPG
- 16-bit reload timer
- Event counter
- Time-base timer
- Watch prescaler

UART-SIO

- Capable of clock-asynchronous (UART) serial data transfer and clock-synchronous (SIO) serial data transfer
- Full duplex double buffer

I²C

Built-in wake-up function

External interrupt

- Interrupt by edge detection (rising edge, falling edge, and both edges can be selected)
- Can be used to wake up the device from different low power consumption (standby) modes

8/10-bit A/D converter

8-bit or 10-bit resolution can be selected

LCD controller (LCDC)

- 40 SEG \times 4 COM (MB95F314E/F314L/F316E/F316L/F318E/F318L)
- 32 SEG \times 4 COM (MB95F374E/F374L/F376E/F376L/F378E/F378L)
- Internal divider resistor
- With blinking function

Low power consumption (standby) modes

- Stop mode
- Sleep mode
- Watch mode
- Time-base timer mode

I/O port

- MB95F314E/F314L/F316E/F316L/F318E/F318L (maximum no. of I/O ports: 71)
General-purpose I/O ports (N-ch open drain): 3
General-purpose I/O ports (CMOS I/O): 68
- MB95F374E/F374L/F376E/F376L/F378E/F378L (maximum no. of I/O ports: 55)
General-purpose I/O ports (N-ch open drain): 3
General-purpose I/O ports (CMOS I/O): 52

On-chip debug

- 1-wire serial control
- Serial writing supported (asynchronous mode)

Hardware/software watchdog timer

- Built-in hardware watchdog timer
- Built-in software watchdog timer

Low-voltage detection reset circuit

- Built-in low-voltage detector
- Three configurable low-voltage detection levels for generating reset
- Five configurable low-voltage detection levels for generating interrupts

Clock supervisor counter

Built-in clock supervisor counter function

Programmable port input voltage level

CMOS input level / hysteresis input level

Dual operation Flash memory

The program/erase operation and the read operation can be executed in different banks (upper bank/lower bank) simultaneously.

Flash memory security function

Protects the content of the Flash memory

1. Product Line-up

■ MB95310L Series

Part number	MB95F314E	MB95F316E	MB95F318E	MB95F314L	MB95F316L	MB95F318L
Parameter						
Type	Flash memory product					
Clock supervisor counter	It supervises the main clock oscillation.					
Flash memory capacity	20 Kbyte	36 Kbyte	60 Kbyte	20 Kbyte	36 Kbyte	60 Kbyte
RAM capacity	496 bytes	1008 bytes	2032 bytes	496 bytes	1008 bytes	2032 bytes
Low-voltage detection reset	Yes			No		
Reset input	Dedicated					
CPU functions	<ul style="list-style-type: none"> • Number of basic instructions : 136 • Instruction bit length : 8 bits • Instruction length : 1 to 3 bytes • Data bit length : 1, 8 and 16 bits • Minimum instruction execution time : 61.5 ns (machine clock frequency = 16.25 MHz) • Interrupt processing time : 0.6 μs (machine clock frequency = 16.25 MHz) 					
General-purpose I/O	<ul style="list-style-type: none"> • I/O ports (Max) : 71 • CMOS I/O : 68 • N-ch open drain : 3 					
Time-base timer	Interval time: 0.256 ms - 8.3 s (external clock frequency = 4 MHz)					
Hardware/software watchdog timer	<ul style="list-style-type: none"> • Reset generation cycle Main oscillation clock at 10 MHz: 105 ms (Min) • The sub-CR clock can be used as the source clock of the hardware watchdog timer. 					
Wild register	It can be used to replace three bytes of data.					
I ² C	1 channel					
	<ul style="list-style-type: none"> • Master/Slave sending and receiving • Bus error function and arbitration function • Detecting transmitting direction function • Start condition repeated generation and detection functions • Built-in wake-up function 					
UART/SIO	2 channels					
	<ul style="list-style-type: none"> • Data transfer with UART/SIO is enabled. • It has a full duplex double buffer, variable data length (5/6/7/8 bits), a built-in baud rate generator and an error detection function. • It uses the NRZ type transfer format. • LSB-first data transfer and MSB-first data transfer are available to use. • Clock-asynchronous (UART) serial data transfer and clock-synchronous (SIO) serial data transfer is enabled. 					
8/10-bit A/D converter	4 channels					
	8-bit or 10-bit resolution can be selected.

Part number	MB95F314E	MB95F316E	MB95F318E	MB95F314L	MB95F316L	MB95F318L
Parameter						
8/16-bit composite timer	2 channels <ul style="list-style-type: none"> Each timer can be configured as an "8-bit timer × 2 channels" or a "16-bit timer × 1 channel". It has built-in timer function, PWC function, PWM function and input capture function. Count clock: it can be selected from internal clocks (seven types) and external clocks. It can output square wave. 					
LCD controller (LCDC)	<ul style="list-style-type: none"> COM output: 4 (Max) SEG output: 40 (Max) LCD drive power supply (bias) pin: 4 (Max) 40 SEG × 4 COM: 160 pixels can be displayed Duty LCD mode Operate in LCD standby mode Blinking function Internal divider resistor for LCD drive 					
16-bit reload timer	1 channel <ul style="list-style-type: none"> Two clock modes and two counter operating modes can be selected Square waveform output Count clock: it can be selected from internal clocks (seven types) and external clocks. Counter operating mode: reload mode or one-shot mode can be selected 					
Event counter	By configuring the 16-bit reload timer and the 8/16-bit composite timer ch. 1, event counter function can be implemented. When the event counter function is used, the 16-bit reload timer and the 8/16-bit composite timer ch. 1 are unavailable.					
8/16-bit PPG	2 channels <ul style="list-style-type: none"> Each channel of the PPG can be used as "8-bit PPG × 2 channels" or "16-bit PPG × 1 channel" Counter operating clock: Eight selectable clock sources 					
Watch counter	<ul style="list-style-type: none"> Count clock: Four selectable clock sources (125 ms, 250 ms, 500 ms or 1 s) Counter value can be set from 0 to 63. (Capable of counting for 1 minute when selecting clock source of 1 second and setting counter value to 60) 					
External interrupt	8 channels <ul style="list-style-type: none"> Interrupt by edge detection (The rising edge, falling edge, or both edges can be selected.) It can be used to wake up the device from the standby mode. 					
On-chip debug	<ul style="list-style-type: none"> 1-wire serial control It supports serial writing. (asynchronous mode) 					
Watch prescaler	Eight different time intervals can be selected. (62.5 ms, 125 ms, 250 ms, 500 ms, 1 s, 2 s, 4 s, 8 s)					
Flash memory	<ul style="list-style-type: none"> It supports automatic programming, Embedded Algorithm, program/erase/erase-suspend/erase-resume commands. It has a flag indicating the completion of the operation of Embedded Algorithm. Number of program/erase cycles: 100000 Data retention time: 20 years Flash security feature for protecting the content of the Flash memory 					
Standby mode	Sleep mode, stop mode, watch mode, time-base timer mode					
Package	FPT-80P-M37

Package	FPT-64P-M38 FPT-64P-M39					

2. Oscillation Stabilization Wait Time

The main CR clock oscillation stabilization wait time is fixed to the maximum value. Below is the maximum value.

Oscillation stabilization wait time	Remarks
$(2^{10} - 2) / F_{CRH}$	Approx. 128 μ s (when the main CR clock is 8 MHz)

The main PLL clock oscillation stabilization wait time is fixed to the maximum value. Below is the maximum value.

Oscillation stabilization wait time	Remarks
$(2^{14} - 2) / F_{CH}$	Approx. 14.1 ms (when the main PLL clock is 4 MHz)

4. Differences Among Products And Notes On Product Selection

■ Current consumption

When using the on-chip debug function, take account of the current consumption of flash erase/write.

For details of current consumption, see “[Electrical Characteristics](#)”.

■ Package

For details of information on each package, see “[Packages And Corresponding Products](#)” and “[Electrical Characteristics](#)”.

■ Operating voltage

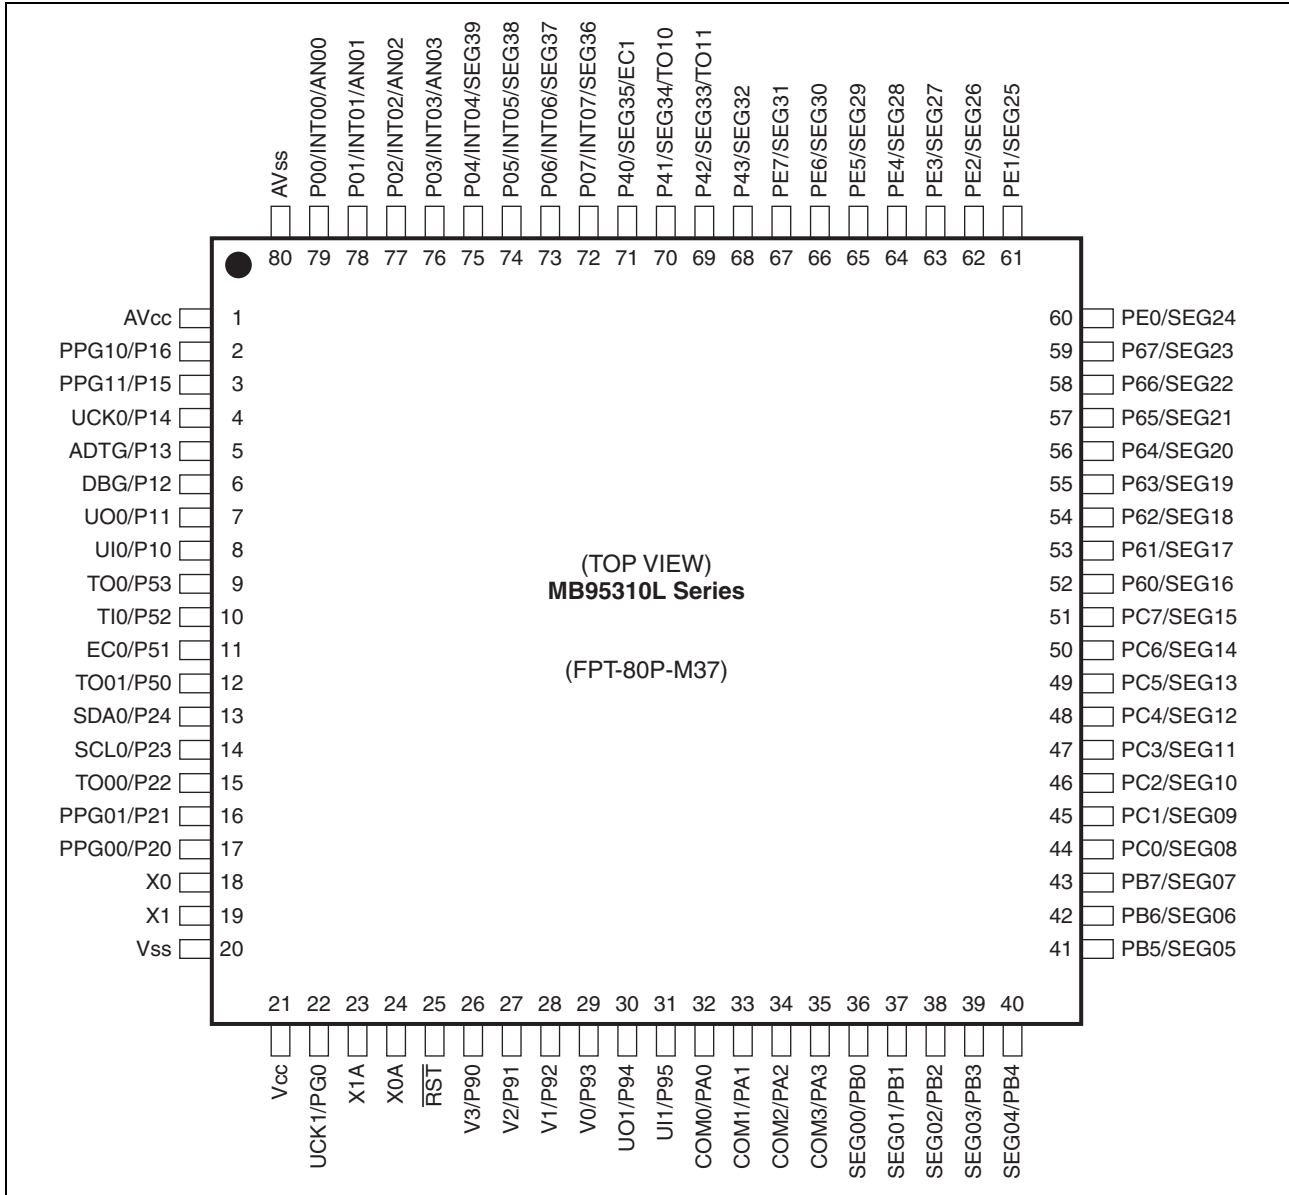

The operating voltage varies, depending on whether the on-chip debug function is used or not.

For details of the operating voltage, see “[Electrical Characteristics](#)”.

■ On-chip debug function

The on-chip debug function requires that V_{CC} , V_{SS} and 1 serial-wire be connected to an evaluation tool. For details of the connection method, refer to “CHAPTER 31 EXAMPLE OF SERIAL PROGRAMMING CONNECTION” in the hardware manual of the MB95310L/370L Series.

5. Pin Assignment

6. Pin Description (MB95310L Series)

Pin no.	Pin name	I/O circuit type*	Function
1	AV _{CC}	—	A/D converter power supply pin
2	P16	H	General-purpose I/O port
	PPG10		8/16-bit PPG ch. 1 output pin
3	P15	H	General-purpose I/O port
	PPG11		8/16-bit PPG ch. 1 output pin
4	P14	H	General-purpose I/O port
	UCK0		UART/SIO ch. 0 clock I/O pin
5	P13	H	General-purpose I/O port
	ADTG		A/D trigger input (ADTG) pin
6	P12	C	General-purpose I/O port
	DBG		DBG input pin
7	P11	H	General-purpose I/O port
	UO0		UART/SIO ch. 0 data output pin
8	P10	G	General-purpose I/O port
	UI0		UART/SIO ch. 0 data input pin
9	P53	H	General-purpose I/O port
	TO0		16-bit reload timer ch. 0 output pin
10	P52	H	General-purpose I/O port
	TI0		16-bit reload timer ch. 0 input pin The pin can also be used as the event counter input pin when the event counter function is used.
11	P51	H	General-purpose I/O port
	EC0		8/16-bit composite timer ch. 0 clock input pin
12	P50	H	General-purpose I/O port
	TO01		8/16-bit composite timer ch. 0 output pin
13	P24	I	General-purpose I/O port
	SDA0		I ² C data I/O pin
14	P23	I	General-purpose I/O port
	SCL0		I ² C clock I/O pin
15	P22	H	General-purpose I/O port
	TO00		8/16-bit composite timer ch. 0 output pin
16	P21	H	General-purpose I/O port
	PPG01		8/16-bit PPG ch. 0 output pin
17	P20	H	General-purpose I/O port
	PPG00		8/16-bit PPG ch. 0 output pin
18	X0	A	Main clock oscillation pin
19	X1	A	Main clock oscillation pin

9. Notes On Device Handling

■ Preventing latch-ups

When using the device, ensure that the voltage applied does not exceed the maximum voltage rating.

In a CMOS IC, if a voltage higher than V_{CC} or a voltage lower than V_{SS} is applied to an input/output pin that is neither a medium-withstand voltage pin nor a high-withstand voltage pin, or if a voltage out of the rating range of power supply voltage mentioned in "18.1 Absolute Maximum Ratings" of "Electrical Characteristics" is applied to the V_{CC} pin or the V_{SS} pin, a latch-up may occur.

When a latch-up occurs, power supply current increases significantly, which may cause a component to be thermally destroyed.

■ Stabilizing supply voltage

Supply voltage must be stabilized.

A malfunction may occur when power supply voltage fluctuates rapidly even though the fluctuation is within the guaranteed operating range of the V_{CC} power supply voltage.

As a rule of voltage stabilization, suppress voltage fluctuation so that the fluctuation in V_{CC} ripple (p-p value) at the commercial frequency (50 Hz/60 Hz) does not exceed 10% of the standard V_{CC} value, and the transient fluctuation rate does not exceed 0.1 V/ms at a momentary fluctuation such as switching the power supply.

■ Notes on using the external clock

When an external clock is used, oscillation stabilization wait time is required for power-on reset, wake-up from subclock mode or stop mode.

10. Pin Connection

■ Treatment of unused input pins

If an unused input pin is left unconnected, a component may be permanently damaged due to malfunctions or latch-ups. Always pull up or pull down an unused input pin through a resistor of at least $2\text{ k}\Omega$. Set an unused input/output pin to the output state and leave it unconnected, or set it to the input state and treat it the same as an unused input pin. If there is an unused output pin, leave it unconnected.

■ Notes on handling the external clock pins while using the CR clock

Connect the X0 pin and the X0A pin to the V_{SS} pin and leave the X1 pin and the X1A pin unconnected.

■ Power supply pins

To reduce unnecessary electro-magnetic emission, prevent malfunctions of strobe signals due to an increase in the ground level, and conform to the total output current standard, always connect the V_{CC} pin and the V_{SS} pin to the power supply and ground outside the device. In addition, connect the current supply source to the V_{CC} pin and the V_{SS} pin with low impedance.

It is also advisable to connect a ceramic capacitor of approximately $0.1\ \mu\text{F}$ as a bypass capacitor between the V_{CC} pin and the V_{SS} pin at a location close to this device.

■ DBG pin

Connect the DBG pin directly to an external pull-up resistor.

To prevent the device from unintentionally entering the debug mode due to noise, minimize the distance between the DBG pin and the V_{CC} or V_{SS} pin when designing the layout of the printed circuit board.

The DBG pin should not stay at "L" level after power-on until the reset output is released.

■ $\overline{\text{RST}}$ pin

Connect the $\overline{\text{RST}}$ pin directly to an external pull-up resistor.

To prevent the device from unintentionally entering the reset mode due to noise, minimize the distance between the $\overline{\text{RST}}$ pin and the V_{CC} or V_{SS} pin when designing the layout of the printed circuit board.

- DBG/ $\overline{\text{RST}}$ pins connection diagram

*: Since the DBG input pin becomes a communication pin in on-chip debug mode, set a pull-up resistor value suiting the input/output specifications of P12/DBG.

11. Recommended Layout

- GND wire should be placed around X0, X1, X0A and X1A

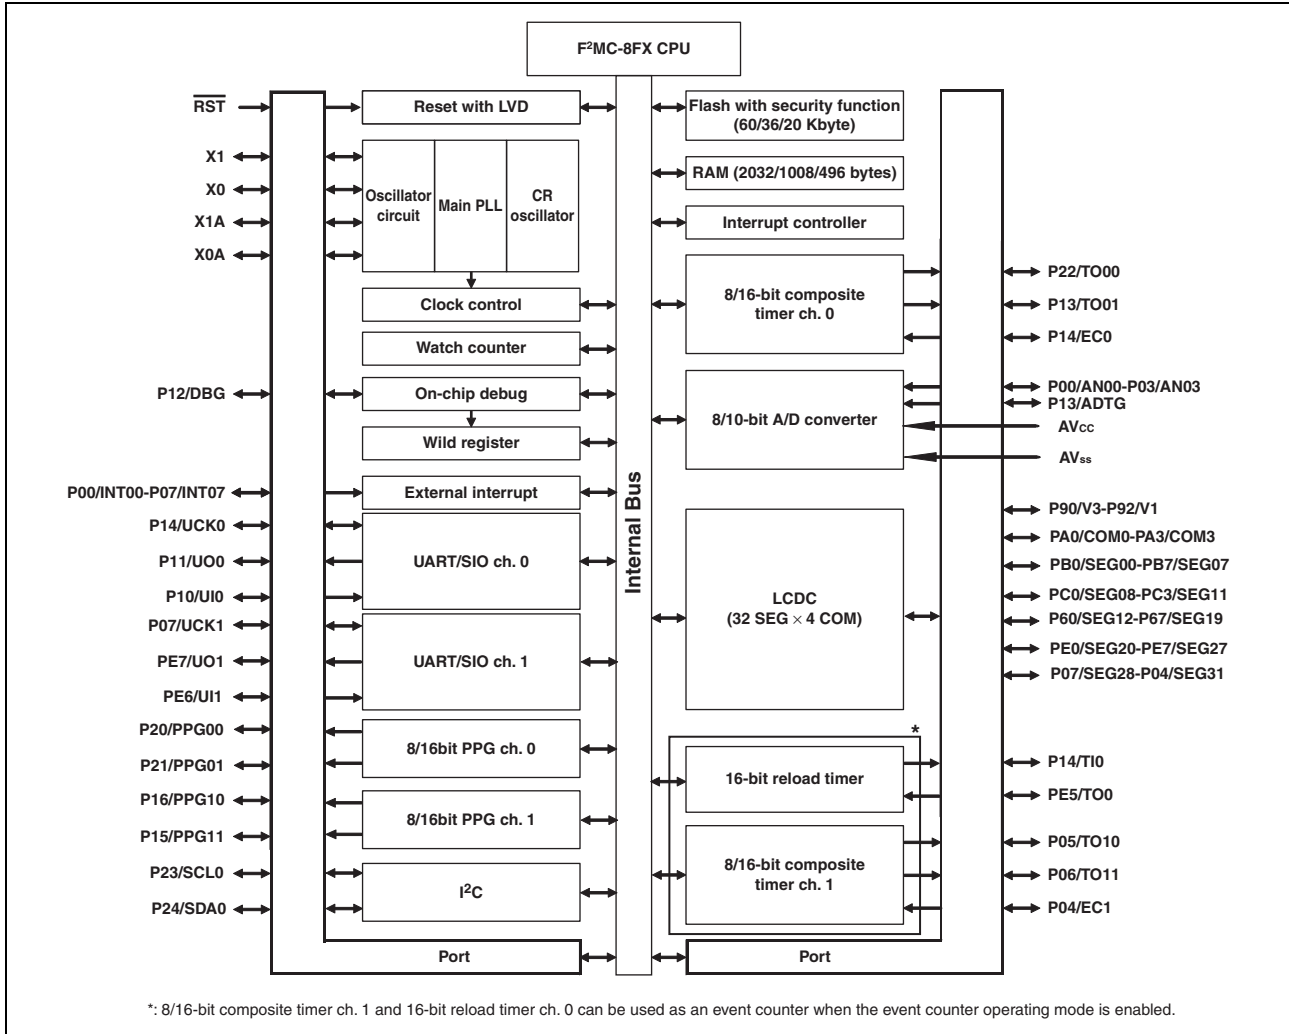

The recommended layout method illustrated in following diagram aims to avoid noise coupled between the oscillator pins and GPIO, which may cause the main oscillator or the sub oscillator to malfunction.

12. Block Diagram (MB95310L Series)

13. Block Diagram (MB95370L Series)

14. CPU Core

■ Memory Space

The memory space of the MB95310L/370L Series is 64 Kbyte in size, and consists of an I/O area, a data area, and a program area. The memory space includes areas intended for specific purposes such as general-purpose registers and a vector table. The memory maps of the MB95310L/370L Series are shown below.

18. Electrical Characteristics

18.1 Absolute Maximum Ratings

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply voltage*1	V_{CC}, AV_{CC}	$V_{SS} - 0.3$	$V_{SS} + 4.0$	V	*2
Power supply voltage for LCD	V0 to V3	$V_{SS} - 0.3$	$V_{SS} + 4.0$	V	Products with LCD internal division resistance*3
Input voltage*1	V_I	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	P23,P24*4
		$V_{SS} - 0.3$	$V_{SS} + 4.0$	V	Other than P23,P24*4
Output voltage*1	V_O	$V_{SS} - 0.3$	$V_{SS} + 4.0$	V	*4
Maximum clamp current	I_{CLAMP}	-2.0	+2.0	mA	Applicable to specific pins*5
Total maximum clamp current	$\Sigma I_{CLAMP} $	—	20	mA	Applicable to specific pins*5
"L" level maximum output current	I_{OL}	—	15	mA	Applicable to specific pins*5
"L" level average current	I_{OLAV}	—	4	mA	Applicable to specific pins*5 Average output current = operating current × operating ratio (1 pin)
"L" level total maximum output current	ΣI_{OL}	—	100	mA	
"L" level total average output current	ΣI_{OLAV}	—	50	mA	Total average output current = operating current × operating ratio (Total number of pins)
"H" level maximum output current	I_{OH}	—	-15	mA	Applicable to specific pins*5
"H" level average current	I_{OHAV}	—	-4	mA	Applicable to specific pins*5 Average output current = operating current × operating ratio (1 pin)
"H" level total maximum output current	ΣI_{OH}	—	-100	mA	
"H" level total average output current	ΣI_{OHAV}	—	-50	mA	Total average output current = operating current × operating ratio (Total number of pins)
Power consumption	P_d	—	320	mW	
Operating temperature	T_A	-40	+85	°C	
Storage temperature	T_{stg}	-55	+150	°C	

*1: These parameters are based on the condition that V_{SS} is 0.0 V.

*2: Apply equal potential to V_{CC} and AV_{CC} .

*3: V0 to V3 should not exceed $V_{CC} + 0.3$ V.

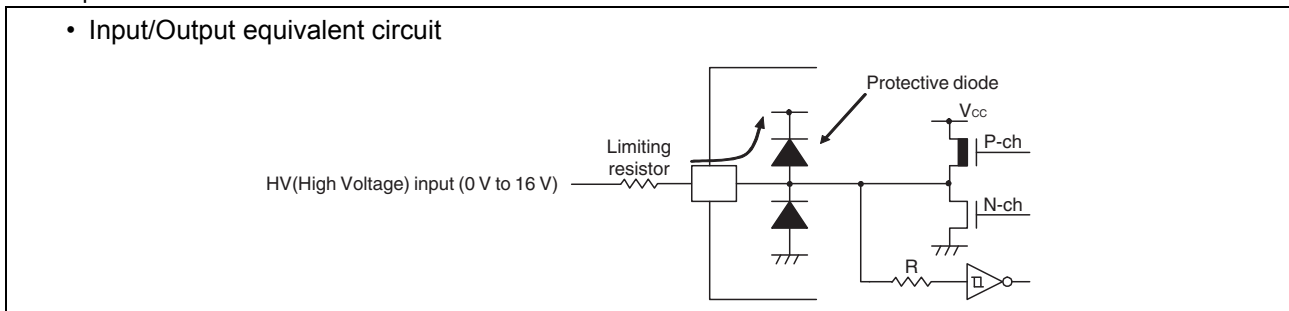

*4: V_I and V_O must not exceed $V_{CC} + 0.3$ V. V_I must not exceed the rated voltage. However, if the maximum current to/from an input is limited by means of an external component, the I_{CLAMP} rating is used instead of the V_I rating.

(Continued)

(Continued)

*5: Applicable to the following pins: P00 to P07, P10, P11, P13 to P16, P20 to P22, P40 to P43, P50 to P53, P60 to P67, P90 to P95, PA0 to PA3, PB0 to PB7, PC0 to PC7, PE0 to PE7, PG0

- Use under recommended operating conditions.
- Use with DC voltage (current).
- The HV (High Voltage) signal is an input signal exceeding the V_{CC} voltage. Always connect a limiting resistor between the HV (High Voltage) signal and the microcontroller before applying the HV (High Voltage) signal.
- The value of the limiting resistance should be set so that when the HV (High Voltage) signal is applied the input current to the microcontroller pin does not exceed rated values, either instantaneously or for prolonged periods.
- When the microcontroller drive current is low, such as in low power consumption modes, the HV (High Voltage) input potential may pass through the protective diode to increase the potential of the V_{CC} pin, and thus affects other devices.
- If the HV (High Voltage) signal is input when the microcontroller power supply is off (not fixed at 0 V), since power is supplied from the pins, incomplete operations may be executed.
- If the HV (High Voltage) input is input after power-on, since power is supplied from the pins, the voltage of power supply may not be sufficient to enable a power-on reset.
- Do not leave the HV (High Voltage) input pin unconnected.
- Example of a recommended circuit

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

18.2 Recommended Operating Conditions

 (V_{SS} = 0.0 V)

Parameter	Symbol	Value		Unit	Remarks	
		Min	Max			
Power supply voltage	V _{CC} , AV _{CC}	1.8*1*2*3	3.6	V	In normal operation, T _A = -10°C to +85°C	Other than on-chip debug mode
		2.0	3.6		In normal operation, T _A = -40°C to +85°C	
		1.5	3.6		Hold condition in stop mode	
		3.10*3	3.6		T _A = +5°C to +35°C	On-chip debug mode
		1.5	3.6		Hold condition in stop mode	
Operating temperature	T _A	-40	+85	°C	Other than on-chip debug mode	
		+5	+35		On-chip debug mode	

*1: The value varies depending on the operating frequency, the machine clock and the analog guaranteed range.

*2: The value is initially 2.03 V when the low-voltage detection reset is used.

*3: The threshold voltage can be set to be 2.03 V, 2.55 V, 3.10 V by software.

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges.

Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their representatives beforehand.

18.3 DC Characteristics
 $(V_{CC} = 3.0 V \pm 10\%, V_{SS} = 0.0 V, T_A = -40^\circ C \text{ to } +85^\circ C)$

*1: It is for MB95310L Series.

*2: It is for MB95370L Series.

*3: The input level can be switched between “CMOS input level” and “hysteresis input level”. The input level selection register (ILSR) is used to switch between the two input levels.

*4: • The power supply current is determined by the external clock. When the low-voltage detection option is selected, the power-supply current will be the sum of adding the current consumption of the low-voltage detection circuit (I_{LVD}) to one of the value from I_{CC} to I_{CCH} . In addition, when both the low-voltage detection option and the CR oscillator are selected, the power supply current will be the sum of adding up the current consumption of the low-voltage detection circuit, the current consumption of the CR oscillators (I_{CRH} , I_{CRL}) and a specified value. In on-chip debug mode, the CR oscillator (I_{CRH}) and the low-voltage detection circuit are always enabled, and current consumption therefore increases accordingly.

			0.0625	—	12.5	MHz	When the main CR clock is used
	F_{MPL}		1.024	—	16.384	kHz	When the sub-oscillation clock is used
			3.125	—	50	kHz	When the sub-CR clock is used $F_{CRL} = 100 \text{ kHz}$

*1: This is the clock before it is divided according to the division ratio set by the machine clock divide ratio select bits (SYCC:DIV1 and DIV0). This source clock is divided to become a machine clock according to the division ratio set by the machine clock divide ratio select bits (SYCC:DIV1 and DIV0). In addition, a source clock can be selected from the following.

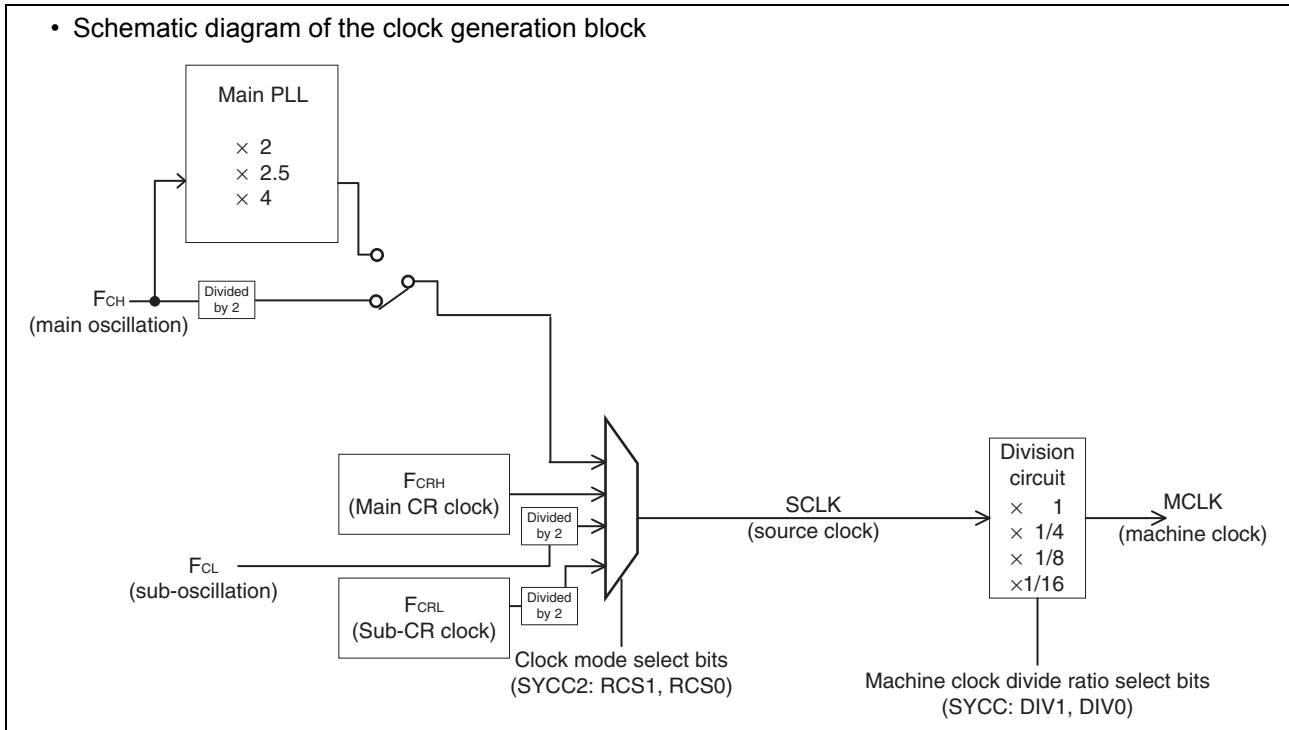

- Main clock divided by 2
- PLL multiplication of main clock (select from 2, 2.5, 4 multiplication)
- Main CR clock divided by 2
- Subclock divided by 2
- Sub-CR clock divided by 2

(Continued)

(Continued)

*2: This is the operating clock of the microcontroller. A machine clock can be selected from the following.

- Source clock (no division)
- Source clock divided by 4
- Source clock divided by 8
- Source clock divided by 16

- Operating voltage - Operating frequency (When $T_A = -10^\circ\text{C}$ to $+85^\circ\text{C}$)
Without the on-chip debug function

- Operating voltage - Operating frequency (When $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$)
Without the on-chip debug function

*1: This is the default LVD reset clear threshold: $1.93\text{ V} \pm 0.10\text{ V}$. It can also be set to $2.40\text{ V} \pm 0.15\text{ V}$ or $2.95\text{ V} \pm 0.15\text{ V}$.

*2: If the LVD reset clear threshold is set to $2.95\text{ V} \pm 0.15\text{ V}$, the slope from 10 MHz to 16.25 MHz should be a horizontal line.

*3: The operating voltage becomes 3.1 V if the LVD reset clear threshold is set to $2.95\text{ V} \pm 0.15\text{ V}$.

*4: The source clock frequency becomes 14.375 MHz if the LVD reset clear threshold is set to $2.40\text{ V} \pm 0.15\text{ V}$.

18.4.3 External Reset

($V_{CC} = 3.0\text{ V} \pm 10\%$, $V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$)

Parameter	Symbol	Value		Unit	Remarks
		Min	Max		
RST "L" level pulse width	t_{RSTL}	$2 t_{MCLK}^{*1}$	—	ns	In normal operation
		Oscillation time of the oscillator ^{*2} + 100	—	μs	In stop mode, subclock mode, subsleep mode, watch mode, and power-on
		100	—	μs	In time-base timer mode

*1: See "(2) Source Clock/Machine Clock" for t_{MCLK} .

*2: The oscillation time of an oscillator is the time for it to reach 90% of its amplitude. The crystal oscillator has an oscillation time of between several ms and tens of ms. The ceramic oscillator has an oscillation time of between hundreds of μs and several ms. The external clock has an oscillation time of 0 ms. The CR oscillator clock has an oscillation time of between several μs and several ms.

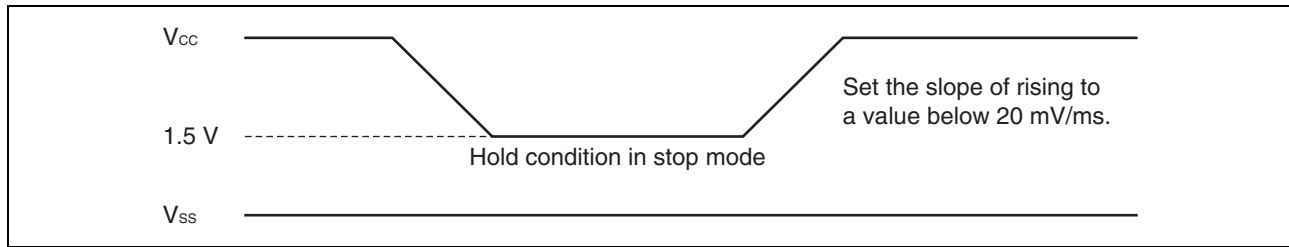

18.4.4 Power-on Reset

($V_{SS} = 0.0\text{ V}$, $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$)

Parameter	Symbol	Condition	Value		Unit	Remarks
			Min	Max		
Power supply rising time	t_R	—	—	50	ms	
Power supply cutoff time	t_{OFF}	—	1	—	ms	Wait time until power-on

Note: A sudden change of power supply voltage may activate the power-on reset function. When changing the power supply voltage during the operation, set the slope of rising to a value below within 20 mV/ms as shown below.

18.4.5 Peripheral Input Timing

($V_{CC} = 3.0 V \pm 10\%$, $V_{SS} = 0.0 V$, $T_A = -40^\circ C$ to $+85^\circ C$)

Parameter	Symbol	Pin name	Value		Unit
			Min	Max	
Peripheral input "H" pulse width	t_{LH}	INT00 to INT07, EC0, EC1, ADTG	$2 t_{MCLK}^*$	—	ns
Peripheral input "L" pulse width	t_{HL}		$2 t_{MCLK}^*$	—	ns

*: See "(2) Source Clock/Machine Clock" for t_{MCLK} .

18.4.6 UART/SIO, Serial I/O Timing

($V_{CC} = 3.0 V \pm 10\%$, $V_{SS} = 0.0 V$, $T_A = -40^\circ C$ to $+85^\circ C$)

Parameter	Symbol	Pin name	Condition	Value		Unit
				Min	Max	
Serial clock cycle time	t_{SCYC}	UCK0, UCK1	Internal clock operation output pin: $C_L = 80 pF + 1 TTL$	$4 t_{MCLK}^*$	—	ns
UCK $\downarrow \rightarrow$ UO time	t_{SLOVI}	UCK0, UCK1, UO0, UO1		-190	+190	ns
Valid UI \rightarrow UCK \uparrow	t_{IVSHI}	UCK0, UCK1, UI0, UI1		$2 t_{MCLK}^*$	—	ns
UCK $\uparrow \rightarrow$ valid UI hold time	t_{SHIXI}	UCK0, UCK1, UI0, UI1		$2 t_{MCLK}^*$	—	ns
Serial clock "H" pulse width	t_{SHSL}	UCK0, UCK1	External clock operation output pin: $C_L = 80 pF + 1 TTL$	$4 t_{MCLK}^*$	—	ns
Serial clock "L" pulse width	t_{SLSH}	UCK0, UCK1		$4 t_{MCLK}^*$	—	ns
UCK $\downarrow \rightarrow$ UO time	t_{SLOVE}	UCK0, UCK1, UO0, UO1		—	190	ns
Valid UI \rightarrow UCK \uparrow	t_{IVSHE}	UCK0, UCK1, UI0, UI1		$2 t_{MCLK}^*$	—	ns
UCK $\uparrow \rightarrow$ valid UI hold time	t_{SHIXE}	UCK0, UCK1, UI0, UI1		$2 t_{MCLK}^*$	—	ns

*: See "(2) Source Clock/Machine Clock" for t_{MCLK} .

Analog input current	I_{AIN}	-0.3	—	+0.3	μA	
Analog input voltage	V_{AIN}	AV_{SS}	—	AV_{CC}	V	

18.5.2 Notes on Using the A/D Converter

■ **External impedance of analog input and its sampling time**

- The A/D converter has a sample and hold circuit. If the external impedance is too high to keep sufficient sampling time, the analog voltage charged to the capacitor of the internal sample and hold circuit is insufficient, adversely affecting A/D conversion precision. Therefore, to satisfy the A/D conversion precision standard, considering the relationship between the external impedance and minimum sampling time, either adjust the register value and operating frequency or decrease the external impedance so that the sampling time is longer than the minimum value. In addition, if sufficient sampling time cannot be secured, connect a capacitor of about 0.1 μF to the analog input pin.

• Analog input equivalent circuit

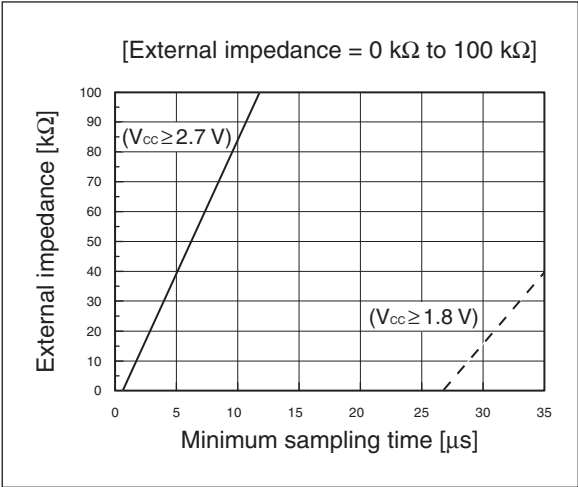

V _{CC}	R	C
2.7 V ≤ V _{CC} ≤ 3.6V	1.7 kΩ (Max)	14.5 pF (Max)
1.8 V ≤ V _{CC} < 2.7 V	8.4 kΩ (Max)	25.2 pF (Max)

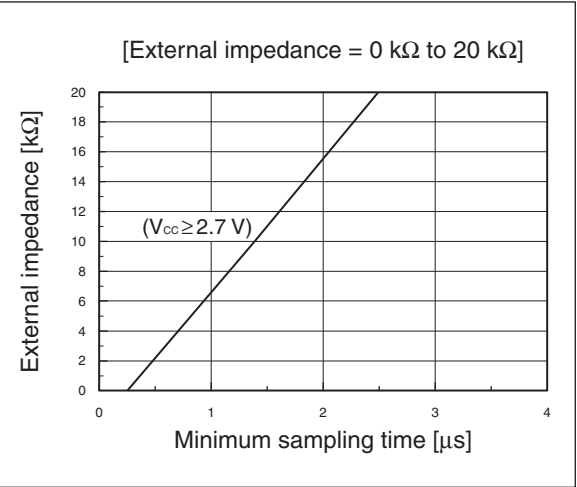

Note: The values are reference values.

• Relationship between external impedance and minimum sampling time

[External impedance = 0 kΩ to 100 kΩ]

[External impedance = 0 kΩ to 20 kΩ]

■ **A/D conversion error**

As $|V_{CC}-V_{SS}|$ decreases, the A/D conversion error increases proportionately.

18.5.3 Definitions of A/D Converter Terms

■ **Resolution**

It indicates the level of analog variation that can be distinguished by the A/D converter. When the number of bits is 10, analog voltage can be divided into $2^{10} = 1024$.

■ **Linearity error (unit: LSB)**

It indicates how much an actual conversion value deviates from the straight line connecting

the zero transition point (“00 0000 0000” ← → “00 0000 0001”) of a device to the full-scale transition point (“11 1111 1111” ← → “11 1111 1110”) of the same device.

■ **Differential linear error (unit: LSB)**

It indicates how much the input voltage required to change the output code by 1 LSB deviates from an ideal value.

■ **Total error (unit: LSB)**

It indicates the difference between an actual value and a theoretical value. The error can be caused by a zero transition error, a full-scale transition errors, a linearity error, a quantum error, or noise.

23. Major Changes

Spanion Publication Number: DS07-12628-2E

Page	Section	Details
1	—	Changed the family name. F ² MC-8FX → New 8FX
1	Features	Changed the main CR clock oscillation frequency. 1/8/10 MHz ±3%, maximum machine clock frequency: 10 MHz → 1/8/10/12.5 MHz ±2%, maximum machine clock frequency: 12.5 MHz
23	Pin Connection	Added “• Notes on handling the external clock pins while using the CR clock”.
46	Electrical Characteristics DC Characteristics	Changed the condition for the power supply current (I _{CCMCR}). F _{CRH} = 10 MHz F _{MP} = 10 MHz Main CR clock mode → F _{CRH} = 12.5 MHz F _{MP} = 12.5 MHz Main CR clock mode Changed the condition for the power supply current (I _{CCSCR}). F _{CL} = 32 kHz F _{MPL} = 16 kHz Sub-CR clock mode (divided by 2) T _A = +25°C → Sub-CR clock mode (divided by 2) T _A = +25°C
47		Changed the condition for the power supply current (I _{CRH}). Current consumption for the main CR oscillator at 10 MHz → Current consumption for the main CR oscillator
48	Electrical Characteristics AC Characteristics Clock Timing	Changed the values of the clock frequency (F _{CRH}).
58	Electrical Characteristics AC Characteristics Low-voltage Detection	Deleted the following parameters: Power hysteresis width 0, Power hysteresis width 1, Power hysteresis width 2, Interrupt hysteresis width 0, Interrupt hysteresis width 1, Interrupt hysteresis width 2, Interrupt hysteresis width 3, Interrupt hysteresis width 4
59		Deleted V _{PHYS} /V _{IHYS} from the diagram.
64	Electrical Characteristics AC Characteristics I ² C Timing	Changed the settings related to the machine clock shown in *2.
70 to 75	Sample Characteristics	Added “■ SAMPLE CHARACTERISTICS”.

NOTE: Please see “Document History” about later revised information.

This document, including any software or firmware included or referenced in this document ("Software"), is owned by Cypress under the intellectual property laws and treaties of the United States and other countries worldwide. Cypress reserves all rights under such laws and treaties and does not, except as specifically stated in this paragraph, grant any license under its patents, copyrights, trademarks, or other intellectual property rights. If the Software is not accompanied by a license agreement and you do not otherwise have a written agreement with Cypress governing the use of the Software, then Cypress hereby grants you under its copyright rights in the Software, a personal, non-exclusive, nontransferable license (without the right to sublicense) (a) for Software provided in source code form, to modify and reproduce the Software solely for use with Cypress hardware products, only internally within your organization, and (b) to distribute the Software in binary code form externally to end users (either directly or indirectly through resellers and distributors), solely for use on Cypress hardware product units. Cypress also grants you a personal, non-exclusive, nontransferable, license (without the right to sublicense) under those claims of Cypress's patents that are infringed by the Software (as provided by Cypress, unmodified) to make, use, distribute, and import the Software solely to the minimum extent that is necessary for you to exercise your rights under the copyright license granted in the previous sentence. Any other use, reproduction, modification, translation, or compilation of the Software is prohibited.

CYPRESS MAKES NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS DOCUMENT OR ANY SOFTWARE, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. Cypress reserves the right to make changes to this document without further notice. Cypress does not assume any liability arising out of the application or use of any product or circuit described in this document. Any information provided in this document, including any sample design information or programming code, is provided only for reference purposes. It is the responsibility of the user of this document to properly design, program, and test the functionality and safety of any application made of this information and any resulting product. Cypress products are not designed, intended, or authorized for use as critical components in systems designed or intended for the operation of weapons, weapons systems, nuclear installations, life-support devices or systems, other medical devices or systems (including resuscitation equipment and surgical implants), pollution control or hazardous substances management, or other uses where the failure of the device or system could cause personal injury, death, or property damage ("Unintended Uses"). A critical component is any component of a device or system whose failure to perform can be reasonably expected to cause the failure of the device or system, or to affect its safety or effectiveness. Cypress is not liable, in whole or in part, and Company shall and hereby does release Cypress from any claim, damage, or other liability arising from or related to all Unintended Uses of Cypress products. Company shall indemnify and hold Cypress harmless from and against all claims, costs, damages, and other liabilities, including claims for personal injury or death, arising from or related to any Unintended Uses of Cypress products.

Cypress, the Cypress logo, Spansion, the Spansion logo, and combinations thereof, PSoC, CapSense, EZ-USB, F-RAM, and Traveo are trademarks or registered trademarks of Cypress in the United States and other countries.
